

In CLAN TECNOLÓGICA ,SL we are dedicated business GENERATION TECHNICAL GASES IN SITU, using as raw material : AIR AND WATER according to gas producing and offering our customers an alternative to purchasing packaged gases . We are not manufacturers , properly integrate the technologies of gas generation with the necessary accessories to suit the needs of the customer .

In CLAN TECNOLÓGICA , SL understand Quality as a management tool by which planned and developed our activities so that compliance with legal and regulatory requirements is achieved, and the specifications of our services, in order to obtain full satisfaction of our customers , getting :

- Variable cost savings for your business.
- Control of raw material production , technical gas needed for processing.
- Independence of supply.
- Technological innovation .
- Differentiation from the competition .
- Focus on adapting to renewable energy. Environmental Care

To achieve this , we understand fundamental implementation and development of a System of Quality Management and Environment based on the UNE EN ISO 9001 : 2015 and ISO 14001 : 2015 , take on the following commitments:

- Compliance with regulations in force in our industry, environmental regulations and other requirements, to which the organization subscribes volunteers,
- Pollution prevention through the minimization of waste production and irrational use of resources, minimizing emissions and controlling our environmental aspects.
- Make our quality and environment policy available to the public and all stakeholders.
- Being a company that meets the needs and expectations of its customers and all stakeholders, encouraging sustainable development.

The System of Quality Management and Environment implanted in CLAN TECNOLÓGICA , SL it is based and encourages the systematic application of **continuous improvement** on all activities , meaning that continuous improvement and the need to plan thoroughly the activities to develop , make them according to what has been decided , check the results against planned and correcting when necessary initiating a new cycle of continuous improvement .

To develop these basic principles , Executive Management formulated each year , strategic goals Quality and the Environment specific to certain areas and / or activities, which are always measurable and consistent with this Policy and the principles it formulated and keeps track of them checking compliance.
